SUMMARY

Software Enginner with a product-minded approach and internship experience building scalable, AI-powered web applications. Delivered high-impact projects including the award-winning Scribe AI note-taking app (30% latency reduction) and the ArchGen AI architecture generator. Skilled in both front-end (React.js,Next.js,TypeScript) and back-end (Node.js,Python,Golang) development, with expertise in deploying containerized (Docker) microservices on AWS. Passionate about shipping novel AI-powered user experiences and taking ownership to build products in a dynamic startup environment.

SKILLS

- **Languages & Frameworks:** React, TypeScript, Python, JavaScript, Golang, Tailwind CSS, HTML
- **Backend & APIs:** Node.js, Express.js, Django, FastAPI, RESTful APIs, Microservices, JWT, OAuth
- **Databases:** PostgreSQL, Firebase, MySQL, MongoDB
- **Cloud & DevOps:** AWS (EC2, S3, Lambda), Docker, Kubernetes, CI/CD, Terraform
- **Version Control & Tools:** Git, GitHub ,Linux, Postman, Unit&Integration Testing (Jest)
- **Soft Skills:** Problem-solving, product-minded, adaptability, collaboration, self-motivation, communication

EXPERIENCE

Full Stack Developer – AI/ML Jan 2026 – Present

Printeast *Remote / Hyderabad, India*

- Architected and maintained full-stack web applications at Printeast, integrating **React.js** frontend with **Node.js/Python** backend and scalable databases **(PostgreSQL/MongoDB)** to power an AI-driven **print-on-demand platform**.
- Integrated and deployed **AI/ML models** using **PyTorch/TensorFlow** and external APIs **(OpenAI, HuggingFace)**, building intelligent modules for content generation, recommendations, analytics, and automation, with secure integrations, performance optimization, and cloud deployment on **AWS**.

Software Development Engineer Oct 2025 – Present

Yume *Remote / Hyderabad, India*

- Architected a scalable City Data Pipeline using **PostgreSQL** and **GraphQL**, establishing a "Single Source of Truth" system that serves unified data to **Web (Next.js)** and **Mobile (React Native)** platforms.
- Engineered a **Python-based ingestion** engine with a Staging-to-Production validation workflow, automating the scraping, processing, and **cloud storage (S3)** of thousands of high-quality travel data points.

EDUCATION

Bachelor of Computer Application, The NorthCap University 2023 – 2026

Relevant Coursework: AI/ML, Cloud Computing, NLP, Cybersecurity **CGPA: 8.6**

PROJECTS

Scribe: AI Note-Taking App: Award-winning LLM-powered full stack web application (**Python, FastAPI, React, PostgreSQL**) recognized with the **SeamEdu 2025 Award**, featuring summarization, quiz generation, and PDF processing; implemented optimized backend APIs to reduce inference latency by **30%** and deployed via CI/CD pipelines on **AWS**.

ArchGen: AI-Powered Architecture Generator: An AI tool using **Python, Next.js (React)**, and **LLMs** to convert business requirements into optimized **AWS** architectures. Deployed via Docker and utilized PostgreSQL for storing user configurations, reducing manual design time by **3x**.

Connectree: The Short Debate App: A real-time debate platform with a Go **(Golang)** backend and **Next.js** front-end delivering secure, **270-second** conversational streams. Leveraged **Tailwind CSS** for a responsive UI and **AI-based arbitration**, reducing platform toxicity by **90%** and gamifying engagement with a dynamic **Karma Score** system.

CERTIFICATIONS

AWS Certified Developer – Associate (2024)

Oracle Cloud Infrastructure Foundations - Associate (2025)
